Guard Tour

Overview

The Guard Tour Program is a software option that enables SAPPHIRE Pro to monitor tours walked by guards. A guard tour is a set of tour points (alarms points or card readers), all of which must be visited within defined time intervals by a guard who makes a round of the points on the tour.

Using the SAPPHIRE Pro software to monitor guard tours creates a real-time monitor of guard tour activity. That is, the system reports when a tour is supposed to start, the guard's progress along the tour and tour completion.

Guard tour activities are reported to the SAPPHIRE Pro software that logs these events and creates guard tour reports for display and/or printing, as configured by the user.

As part of guard tour setup, both alarm points and readers can be configured as guard tour points. Employee cards flagged for use on guard tours are assigned to guards who have access points on their tours.

NOTE: There is no special hardware installation required to enable the Guard Tour option to function properly. If you need further information regarding the setup of Security Areas, Readers, and Alarm Points see the SAPPHIRE Pro User Manual.

Guard Tour Reports

Guard tour points are alarm points and/or card readers that have been designated for use on a guard tour. The guard walking the tour will trigger an alarm point or slide his or her access card in a card reader to record the location of the point and the time the Guard activated it. If the card reader is a keypad reader the guard may also be required to enter a number if the keypad is enabled.

From the SAPPHIRE Pro software's point of view, guard tour points are like other alarm points and access points. When an event occurs at one of these points, an event message is created, the same as at any alarm or access point. Figure 1 illustrates a guard tour report. This is the report created when the SAPPHIRE Pro software automatically starts a guard tour.

EVENT	#	1110	GUARD TOUR REPORT
	2001/05/20		
	Sun 09:09:09		
REQUESTOR:		TIME SCHEDULE ON-LINE	
STATUS:		TOUR STARTED	(AUTO-TIMER)
TOUR NUMBER:		2	

Figure 1: Guard Tour Illustrated Report.

If necessary for company protocol, the workstation operator may have to acknowledge the report.

Designing a Guard Tour

Setting up a Guard Tour requires careful planning to make certain that the area of the tour is thoroughly covered by the Guard walking the tour area. This means laying out the route of the tour so that all areas are visited and so that it can be completed in the designated time. Time parameters must also be carefully thought out so that enough time is allowed for the guard to move from point to point without triggering a warning. The time should be long enough to allow the guard to reach the point and short enough to provide the operator at the workstation with sufficient notice if the guard fails to make a specified point.

Once a Guard Tour has been designed, there are several steps to setting up the Guard Tour in SAPPHIRE Pro. You will need to define Time Blocks during which a Tour is active, select the tour points for the Guard Tour and designate the workstation where the Tour will be monitored.

Tour Event Messages

During the Tour, various messages will be generated by SAPPHIRE Pro to keep the operator at the workstation aware of the status of the tour progress. Some of these messages will simply be added to the tour, others will require that the operator acknowledge them. Table 1 contains a list of warning messages that are used in the SAPPHIRE Pro Guard Tour option.

Status	Description
Tour Point Reached	The guard has reached the tour point within the time interval established by the tour design.
Tour Started (Auto Timer)	The SAPPHIRE Pro SOFTWARE has started a tour based on preset configuration information.
Tour Started (Override)	An operator at a workstation has started a tour by using the guard tour override capability.
Tour Completed Successfully	The guard has completed the tour in the expected amount of time. This message means the tour has been completed with an OK status.
Tour Finished Too Soon	The guard has completed the tour earlier than the minimum tour time designated.
Tour Time Expired	Tour design requires the tour to be completed in a designated amount of time. The guard has not completed the tour in the expected amount of time.
Tour Halted (Override)	An operator at a workstation has halted an in-progress tour using the guard tour override capability.
Point-to-Point Timeout	Tour design requires the guard to walk from one point in the tour to another point within a predetermined amount of time. The designated time has expired since the guard last reached a point.
Cannot Start Tour, Disk File Error	The computer has attempted to start the tour but was unable to read the disk file where the tour is to be stored.

Table 1: Guard Tour Report Messages

Cannot Start Tour, Memory Unavailable	The computer has attempted to start the tour but there is not enough RAM memory on the computer.
Attempt to Start Active Tour	This event message indicates the time that the computer began to start an active tour
Attempt to Close Inactive Tour	This event message indicates the time that the computer began to shut down a tour that has become inactive.
Point-to-Point Timeout on Inactive Tour	The designated time allowed between two tour points has expired since the last point was triggered by the guard. However, the tour has become Inactive.

Table 1: Guard Tour Report Messages (Continued)

Define Time Control Blocks

The SAPPHIRE Pro **Guard Tour** page is one of the Additional Features under the SETUP button. To setup a Guard Tour, you will need to:

- Setup Time Control Blocks which control Maximum and Minimum time parameters and the days and times when the tour will be performed.
- Select the Alarm Points and Readers that will be used as part of a specific Tour and route the tour information to a specific workstation routing group.
- Designate how the various tour messages must be handled for each tour.

To navigate to the **Guard Tour** page, click the  **Setup** button in the main navigation bar at the left side of the browser window then click on the  **Blue Eye** button next to **Additional Features** on the main Setup page. Click the  **Blue Eye** button next to **Guard Tour** the following **Time Control** screen will display. You can also click the **Guard Tour** tab from any **Additional Features** page and the following **Time Control** screen will display.

Figure 2: Individual Start Time Control Block

Individual Start Time

The **Individual Start Time** type of Guard Tour configuration, allows the operator to vary the actual time that a guard is expected to trip any given Tour point on a given day. For example, the guard could be scheduled to trip the Main Entrance reader at 6:00 PM on Monday and Wednesday, 6:30 on Tuesday, Thursday and Saturday, and 7:00 on Sundays. By varying the times that the guard trips the various Tour Points, it makes it more difficult to study the guards movements and establish the pattern.

NOTE: If there are already Time Control blocks configured, press Clear before adding new ones.

1. From the drop down list select the **Time Control Block No.** you wish to configure. There are 64 Time Control Blocks available in the SAPPHIRE Pro Guard Tour Option.
2. Set the **Maximum Time** that the tour can run, 1 hour to 3 hours and 59 minutes. If the tour runs longer than the maximum time an event will be generated.
3. Set the **Minimum Time** that the tour can run, 1 hour to 3 hours and 59 minutes. If the tour is completed in less than the minimum time an event will be generated.
4. Set the **Point-to-Point Time** for the tour. This will be the amount of time that can elapse between points before an event is generated.
5. Set the **time of day** and **days of the week** that the tour will begin. The Hours and Minutes are in 24-hour time designation. Up to 16 start times can be configured. Choosing different start times for a specific tour, will mean the guard will be in different parts of the tour at different times of each day. This prevents people from studying the guards movements so that they can avoid the guard.
6. Click the **Save/Add** button to add the Guard Tour Time Controls. The Time Control Block No. you chose will appear in the **Time Control Blocks** field with the words *Time Control Block ##*.
7. The message **Operation Complete** will display.

Repeat

The **Repeat** type guard tour provides a simple guard tour that is repeated a set number of times during the selected time parameters. The security can be increased in this type of tour, but having the guard vary the order in which she trips the required alarm points or readers. This can either be designed by the manager or left to the discretion of the guard. As long as each selected tour point is tripped during each repetition of the tour, it will be considered completed.

Select **Repeat** from the drop down list and the following screen will be displayed.

The screenshot displays the SAPPHIRE Pro Guard Tour configuration interface. The 'Type' dropdown is set to 'Repeat'. The 'Time Control Block No.' is set to '1'. The 'Maximum Time', 'Minimum Time', and 'Point-to-Point Time' are all set to '0' hours and '0' minutes. The 'Start Time' is set to '0' hours and '0' minutes. The 'Stop Time' is set to '0' hours and '0' minutes. The 'Repeat Interval' is set to '0' hours and '0' minutes. The days of the week are listed with checkboxes: Sunday, Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, and Holidays. The 'Save / Add', 'Delete', and 'Clear' buttons are visible at the bottom.

Figure 3: Repeat Time Control Block

1. From the drop down list select the **Time Control Block No.** you wish to configure.
2. Set the **Maximum Time** that the tour can run, 1 hour to 3 hours and 59 minutes. If the tour runs longer than the maximum time an event will be generated.
3. Set the **Minimum Time** that the tour can run, 1 hour to 3 hours and 59 minutes. If the tour is completed in less than the minimum time an event will be generated.
4. Set the **Point-to-Point Time** for the tour. This will be the amount of time that can elapse between points before an event is generated.
5. Set the **Start Time** hour and minute. This is the time the tour will start.
6. Set the **Stop Time** hour and minute. This is the time the tour will end.
7. Set the time for the tour **Repeat Interval**. For example, if set for 1 hour 30 minutes the tour will start over every 90 minutes until the Stop Time is reached.
8. Click the box next to each **day of the week** the tour is to run. A checkmark will appear in the box.
9. Click the **Save/Add** button to Add the Guard Tour Repeat. Time Control Block ## will appear in the **Time Control Block** field.

The message **Operation Complete** will display.

NOTE: Before continuing with the Guard Tour Setup, you must have readers and alarm points configured to be the Guard Tour Points. If you have tour points configured skip to the **Setup** page.

Setup the Guard Tour

Points are assigned to a guard tour by associating points with a guard tour number. Both alarm points and readers can be assigned to a guard tour number. Note that:

- The alarm points and readers *must have already been configured for guard tour* before they can be assigned to a guard tour. See the SAPPHIRE Pro User Manual for more information on setting up Alarm Points or Readers.
- Only NEW alarms trigger guard tour events. CANCELLED alarms or NEW or CANCELLED troubles will not trigger guard tour events.

To setup a guard tour, from the SETUP section select Additional Features then Guard Tour. Click the Setup Tab under the Guard Tour tab and the following screen will display.

Figure 4: Guard Tour Setup Page.

1. Select the **Guard Tour** number that you wish to configure. The maximum number of tours will vary depending on your system.
2. Select from the drop down list of configured **Time Control Block** the block the tour will use.
3. Select the **Workstation** where the tour will report.
4. Select the **Tour Points** that will be included in this Guard Tour. The Tour points that are in this list are the Alarm Points and Readers that have been designated as a Guard Tour Point.

Alarm Points as Tour Points

To designate an Alarm Point for Guard Tour, click the check box on the Alarm Point Setup page as shown below. Tour Points should be manually activated switches, usually operated with a key.

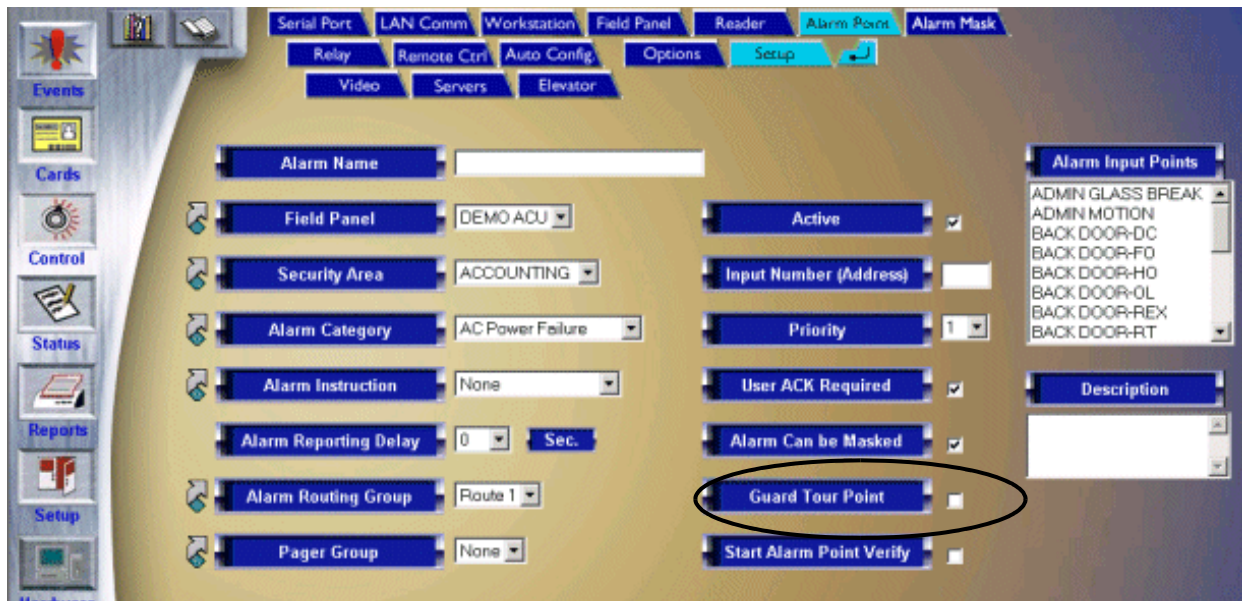

Figure 5: Designating an Alarm Point for Guard Tour

Readers as Tour Points

To designate a reader for Guard Tour, click the check box on the Reader Options 2 page as shown below.

Figure 6: Designating a Reader for Guard Tour

5. Select from the list of Available Tour Points all of the points that will be used in this Guard Tour, then click the  **Right Red Arrow** to move them to the **Selected Tour Points** list. This can be done one at a time, or by holding the control key while clicking on the various points, you can highlight several points and move them to the Selected Tour Points box together.

Once the tour points are moved to the selected box, they will report a new alarm or reader swipe as a tour event to the designated workstation group after the assigned start of the Guard Tour. They can be triggered in any order during the period of the tour. The events will be reported in the order that they are triggered. It is recommended that tour points be triggered in different sequences for each tour to minimize the possibility that a tour pattern can be discovered by unauthorized persons.

6. Now select the Guards who will be performing this Guard Tour. Only the card holders who have been designated for Guard Tour will appear in the Available Cards box.

Designating Cards for Guard Tour

To designate a cardholder for Guard Tour duty, click the check box on the Employee Access page as shown below.

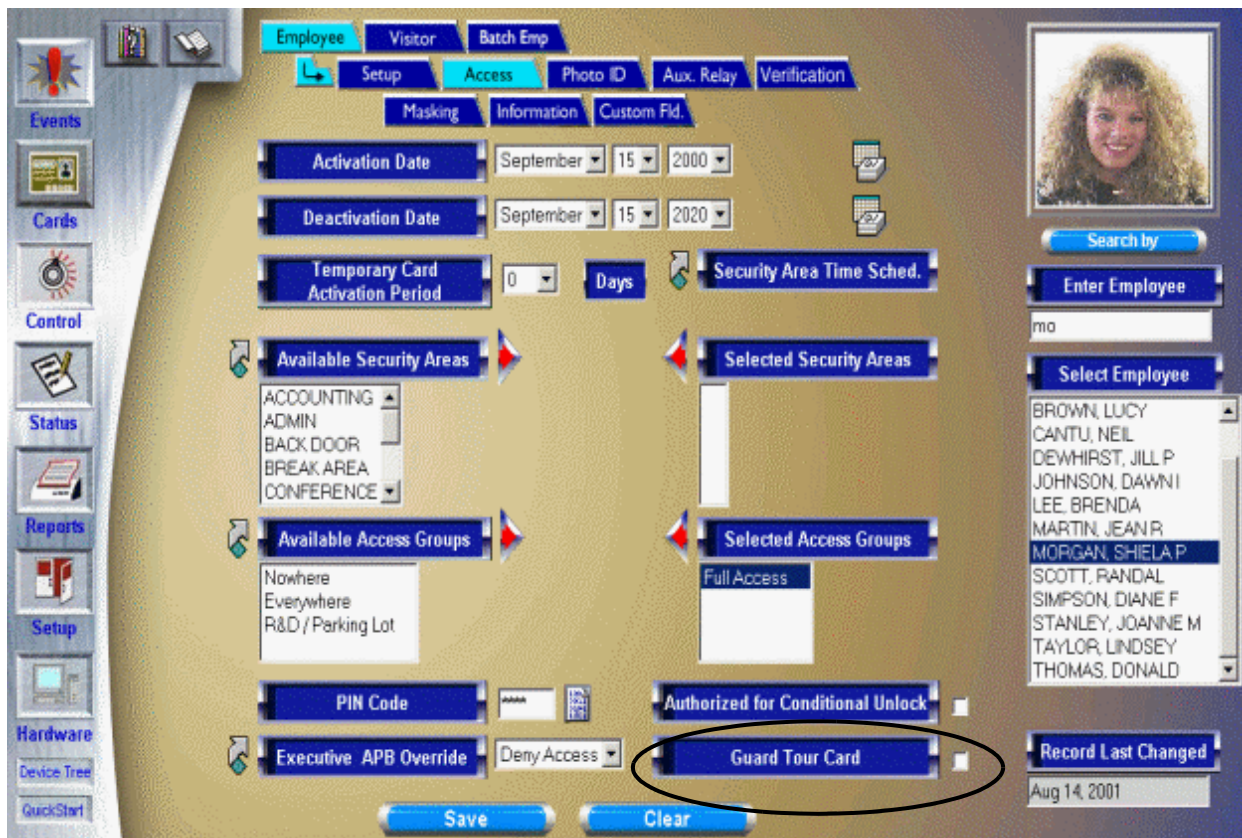

Figure 7: Designating a Cardholder for Guard Tour.

7. Select from the list of Available Tour Cards all of the Guards (cardholders) that are going to be walking this Guard Tour, then click the  **Right Red Arrow** to move them to the **Selected Tour Cards** list. This can be done one at a time, or by holding the control key while clicking on the various cards, you can highlight several cards and move them to the **Selected Tour Cards** box together.

NOTE: If a card that is not designated as a **Guard Tour Card** is swiped through a selected reader during the period of a guard tour, that event will be reported as an access event not a guard tour event.

8. Click the **Save/Add** button to save the Guard Tour Settings.

The message **Operation Complete** will display.

Report Event Codes Handling

There are 13 event codes used for guard tour (See Table 1 for descriptions of these event codes). You can set each of them to require any combination of the three processing options: Acknowledgement, Display, Print. By default, all guard tour events are:

- Displayed in the log event window.
- Printed at the log printer.
- Do not require operator acknowledgement.

You can change any of these Guard Tour Report Options.

To navigate to the **Event Codes** page, click the  **Setup** button in the main navigation bar at the left side of the browser window then click on the  **Blue Eye** button next to **Additional Features** on the main Setup page. Click the  **Blue Eye** button next to **Guard Tour** then click the **Event Codes** button and the following screen will display. You can also click the **Guard Tour** tab and then the **Event Codes** tab button from any **Additional Features** page.

Event Code	Acknowledge	Display	Print
Tour Point Reached	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Tour Started (Auto Timer)	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Tour Started (Override)	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Tour Completed Successfully	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Tour Finished Too Soon	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Tour Time Expired	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Tour Halted (Override)	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Point-to-Point Timeout	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Cannot Start Tour, Disk File Error	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Cannot Start Tour, Memory Unavailable	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Attempt to Start Active Tour	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Attempt to Close Inactive Tour	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Point-to-Point Timeout on Inactive Tour	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

Figure 8: Guard Tour Event Codes page

Select the desired options by clicking the box next to each event code under the desired action placing a checkmark in the box.

After all the report events have been configured, click the **Save/Add** button.

The message **Operation Complete** will display.

You have now completed the Guard Tour Setup process.
